

WORKING PAPER

Carbon accounting for builders: a working method

Status: INDICATIVE. This is original general working material. It contains no verified client data, market benchmark, survey result, design approval, or professional advice.

How to use this resource

- An evidence-first checklist for an embodied-carbon estimate. It does not contain emissions factors or certify a project result.
- Set the assessment boundary, capture quantities and units, cite the factor source and version, and preserve calculation assumptions.
- Label incomplete data and avoid comparisons until boundaries and sources are aligned.
