

FIELD GUIDE

Monsoon concreting decision tree

Status: INDICATIVE. This is original general working material. It contains no verified client data, market benchmark, survey result, design approval, or professional advice.

How to use this resource

- A planning prompt for site teams facing wet-weather pours. It is not a mix-design approval or a substitute for the engineer's instructions.
- Before a pour: check the approved method statement, weather observation, access, drainage, materials protection, and curing plan.
- During and after: document any deviation, hold point, instruction, and test record in the project quality system.
