

WORKING PAPER

Retrofit payback models: comparison prompts

Status: INDICATIVE. This is original general working material. It contains no verified client data, market benchmark, survey result, design approval, or professional advice.

How to use this resource

- A framework for testing retrofit options. It does not forecast savings, costs, or payback for any building.
- List the intervention, baseline evidence, capital cost basis, operating assumptions, service life, risk, and decision owner.
- Run sensitivity checks with project-specific evidence; do not treat a single payback number as a decision by itself.

Evidence record

Project / package	Evidence source	Reviewer	Date	Status

Use only with project-specific verification. The responsible professional or contract administrator remains accountable for any decision made from this material.
