

WORKING PAPER

Standards as a procurement filter

Status: INDICATIVE. This is original general working material. It contains no verified client data, market benchmark, survey result, design approval, or professional advice.

How to use this resource

- A practical framework for making relevant standards visible in procurement evaluation without treating compliance as a checkbox.
- Define the applicable standard and revision, the evidence expected from each bidder, and who is competent to review it.
- Keep price comparison separate from technical acceptability; a low quote without traceable evidence remains unresolved.
