

WORKING PAPER

Thermal envelope design: trade-off prompts

Status: INDICATIVE. This is original general working material. It contains no verified client data, market benchmark, survey result, design approval, or professional advice.

How to use this resource

- A decision framework for comparing envelope options without asserting energy or cost performance for a specific project.
- Define climate inputs, target comfort criteria, material availability, buildability, maintenance, and the relevant model assumptions.
- Record capital, operating, and replacement assumptions separately so the team can test sensitivity transparently.
